EXPERIENCE

Skild AI - Robotics Intern

May 2026 - August 2026

- Developed and deployed generalist robot-learning policies on humanoid, bimanual, and mobile-manipulator platforms, adapting them to varied sensing configurations and action spaces
- Integrated and scaled neural motion planners with robot control systems, enabling collision-free execution of real-world tasks
- Designed large-scale simulation pipelines to generate diverse training data for robot foundation models
- Built multimodal data-collection and processing infrastructure supporting policy training and systematic on-robot evaluation

Pathak Research Group, Carnegie Mellon University - SURA Robotics Research Intern

February 2025 - Present

- Developed a neural motion planner for coordinated mobile-base and arm motion from depth and LiDAR observations; first-author paper submitted to ICRA 2027
- Adapt and train vision-language-action models like π_0 and RDT for new robot embodiments, including robots with dexterous hands
- Develop behavior-cloning methods for autonomous mobile and dexterous manipulation from limited demonstrations in unstructured environments
- Train robot policies to avoid collisions with obstacles and nearby people during manipulation
- Integrate classical whole-body controllers with learned manipulation policies to produce smooth robot trajectories

Interactive Perception and Robot Learning Lab, Stanford University (Bohg Lab) - Computer Vision Research Intern

September 2022 - August 2023

- Coauthored [TidyBot](#) research paper (Cited by 600+), presented at the International Conference on Intelligent Robots and Systems in 2023
- Developed modifications to the ViLD object detection model with WordNet and other semantic hierarchies to establish baseline performance for classification of previously unseen objects
- Built novel machine learning model utilizing an object detection and CNN pipeline to complete the task of unfolding cloths
- Achieved an 80% relative success rate improvement over the leading alternative method (developed by researchers at Columbia University)

EDUCATION

Carnegie Mellon University
School of Computer Science,
B.S. in Computer Science, Minor
in International Relations
Expected May 2028
GPA: 3.8

Relevant Coursework: Deep Reinforcement Learning and Control, Computer Networking, Probability and Computing, Principles of Functional Programming

LEADERSHIP

- President, Alexander Hamilton Society
- Teacher, TechNights

AWARDS

- **Parliamentary Debate National Champion**, won the Tournament of Champions in 2023
- **CMU SCS Dean's List High Honors**, 2 Semesters

TECHNICAL SKILLS

- **Languages:** Python, C++, C, Java, JavaScript
- **Frameworks & Tools:** PyTorch, JAX, ROS1/ROS2, React, Geometric Fabrics
